ASTR 4 – Solar System Astronomy Winter 2025

Class days and time: M/W, 1:30-3:45pm

Class Locations: Monday in FOR3, Wednesday in PLT

Instructor: Caitlin Kepple (she/they)

Instructor email: <u>kepplecaitlinmarie@fhda.edu</u>
Open office hours: Mon, Tu 3:45-4:15 in S34 (or S46-A)

Wed 10:00am-12pm in S55 PST Village Space Th 10-11am on Zoom

Welcome to Solar System Astronomy! In this course, we will explore current and historical understandings of astronomy from a variety of perspectives. We'll use real-world data to build knowledge and skills around astronomy as a science, while also interrogating the traditional view of science as an "objective" pursuit. We will also draw on knowledge from several disciplines and cultures to help us understand the forces that shape our view of science as individuals and broadly in the US.

Course Learning Goals

Throughout this course, we will pursue the following set of skills related to studying astronomy:

- Appraise the benefits to society of planetary research and exploration
- Compare and contrast the development of planetary systems and of the major planet types, including those factors that have led to Earth's unique characteristics
- Evaluate astronomical news items or theories concerning solar system astronomy based upon the scientific method
- Describe ethical dilemmas arising out of contemporary scientific research and application from a variety of perspectives among local and/or global communities
- Understand and articulate the relevance and impact of astronomy research on an individual, community, and societal level
- Draw on and integrate lived experiences related to science to construct a shared understanding of astronomical knowledge and research

Inclusivity Statement

As a starting point for creating a welcoming learning environment, we will refer to the <u>Inclusive Astronomy Recommendations</u> and actively work to improve on the practices they recommend. Materials in this course will strive to center the experiences of historically marginalized groups in astronomy using an intersectional lens. We will draw on different ways of knowing and learning astronomy, both historically and today. Additionally, we will work as a class to further identify how we are maintaining internalized biases about scientific knowledge and what perspectives are being left out of the conversation.

Course Texts

- -Astronomy, by OpenStax (available in print for \$60 or as a free PDF here)
- -Selected readings available on Canvas each week

Important Dates

Jan 19: Last day to add classes

Jan 19: Last day to drop classes with no record

Jan 20: Martin Luther King Jr. Holiday (no classes) Feb 14-17: President's Day Holiday (no classes) Feb 28: Last Day to withdraw ("W") from courses

Mar 24-28: Final Exams

Grade Breakdown

Grades are based on a combination of note-taking, in-class assignments, a larger project, and final exam grades—each of which is described more below. Each assignment type is constructed so that success in the class is possible via a wide variety of methods (not just one make-or-break assignment).

Pre-Class Assignments (lowest 2 dropped) - 15% APOD Presentation - 5% In-class Work (lowest 2 dropped) - 20% Bi-weekly Wrap-up Quizzes - 25% Special Interest Project - 20% Final Exam - 15%

<u>Late work policy:</u> There is a 24-hour buffer period for all assignments with no penalty. If it is between 1-10 days late, there is a 5% penalty. For more than 10 days late there is a 10% penalty. You can submit any assignment up until Friday of Week 11 at 11:59pm. *This is a hard cutoff date at the end of the quarter.*

Course Structure

Our course is designed so that everyone can construct their astronomy knowledge from the ground up and access the material with a variety of learning styles, starting with short in-class assignments before moving on to the quizzes and special interest project. For more details, rubrics and make-up options for each item, see the Canvas page.

Pre-synchronous work - Videos, Reading, and Assignment (15%)

You can find the assigned videos and reading for each class session on Canvas
(the schedule below is only tentative). As you complete the videos and readings,
you should take notes and complete a brief assignment *before* coming to class.
 Treat this as you would a homework assignment!

APOD Presentations (5%)

 Early in the quarter, you'll sign up to do a short presentation of an Astronomy Picture of the Day or "APOD" image of your choosing. Each class day (starting in Week 2), a couple of people will present their chosen picture and what they found interesting about it. Sign-ups will be during the first week of class.

In-class Activities (20%)

• We will have in-class activities every class day (thus attendance is important!). These will mostly be submitted on Canvas in group format, though sometimes individually. They are graded on completeness (70%), correctness (20%), and timeliness (10%). If you are absent, you can still complete these, albeit without the aid of your peers or instructor to help you in real time.

Bi-weekly Wrap-up "Quizzes" (25%)

• Wrap-up Quizzes serve two purposes. 1: A low-stakes way to help you gauge your own progress with the material 2: They are your *best* reference in preparing for

the final. Every two weeks, we'll complete a short in-class practice quiz. Then, you'll note any corrections and use the practice quiz to complete very similar questions on Canvas.

Special Interest Project (20%)

 During the second half of the quarter, you'll choose a topic to research and present about in the last two weeks of class. This may be done solo or in a pair. The topic must relate to Stellar Astronomy in some way, but otherwise is fairly open-ended.

Final Exam (15%)

 We will have one cumulative final exam at the end of the quarter during finals week. The format will be the same as quizzes, with multiple choice/fill in the blank/short-answer style questions. You will need a calculator, which can be borrowed from the Campus <u>Library</u>.

Technology in class

As you can see from the above descriptions, this course relies on Canvas and other online sources quite a bit while in class. It is ideal if you have the ability to bring a laptop or tablet to class, but it is not required. If you are in need of a laptop for college, the De Anza <u>Library</u> offers single day or quarter-length lending options for laptops, tablets, and calculators.

Generative Artificial Intelligence Use and Academic Integrity

I encourage every person reading this text to think about the implications of using generative artificial intelligence (AI) from multiple standpoints. While it can be used as a tool for learning, there are both ethical and educational considerations we should all take into account each time we use AI. For example, the exponential increase in AI usage has resulted in massive strain on energy and water resources around the world. You can read this article on the environmental impacts of using AI so heavily for more information.

There are certain points in the course I leave the option for you to experiment with using AI as a tool to help you solidify your understanding of the material. Otherwise, I specifically discourage the use of AI to search for answers, write up assignments, or complete any portion of the work for you. I specifically grade assignments assuming that you are human, and that the outcome will not be perfect from the get-go. I ask that you also allow yourself to make mistakes and take time to sit with new material.

As your instructor, my priority is to give you ample space and time to grow your scientific literacy and knowledge—no matter where you are beginning from at the start of the quarter. Plagiarism or cheating explicitly violates De Anza's <u>Student Code of Conduct</u> guidelines and will result in a zero on that assignment, or further action if necessary.

There are several *free* resources at De Anza to provide extra support, to prevent cheating and plagiarism (listed below). Additionally, please do not hesitate to reach out to me if there is another way I can support your learning that has not already been made available.

Resources for this Class and Beyond

Math, Science & Technology Resource Center

De Anza's Math, Science & Technology Resource Center has *free*_peer tutoring and workshops, found <u>here</u>. Additionally, the Student Success Center can provide help with general skills, writing, Canvas, and much more <u>here</u>. They have drop-in tutoring via Zoom, or Weekly Individual tutoring (see updates on this for Fall 2022 on their website).

Disability Access and Support

If you have registered with the <u>Disability Support Services</u> (DSS; located in RSS 141; <u>dss@deanza.edu</u>) or need alternate support for creating an accessible learning experience, please do not hesitate to communicate with me about this. DSS staff can meet with students, review the documentation of their disabilities, and discuss services that De Anza offers and any ADA accommodations for specific courses. Additionally, I will do whatever I can to ensure these needs are met during your time in my class. You can find more information about the <u>Computer Accessibility Lab</u> (CAL) at De Anza by following the link to their webpage.

Student disclosures of sexual violence

De Anza College strives to foster a campus free of sexual violence including sexual harassment, domestic violence, dating violence, stalking, and/or any form of sex or gender discrimination. Please note, if you disclose a personal experience as a De Anza student, the course instructor is required to notify the Title IX Coordinator (Laureen Balducci).

To disclose any such violence confidentially, contact the Title IX coordinator using the following forms or by phone at 408-864-8945

- Reporting Sexual Misconduct or Concern
- Contacts Page

Pride Center

The De Anza Pride Center provides a safe, supportive and welcoming space for students across the gender and sexuality spectrum to build community, find resources and connect with the support needed to thrive in their college experience. You can visit the Pride Center at LIB 138 and see additional details about hours and points of contact on the <u>Pride website here</u>.

Counseling Services

The De Anza Psychological Services office provides a wide variety of counseling services for students or groups **free for students**. Please see <u>the MHWC website</u> for their current schedule and list of contacts. They can be contacted at 408-864-8868 or by emailing dapsychservice@deanza.edu.

Resources for Basic Needs

If you or someone you know are in need of housing assistance, food assistance, baby supplies and resources (along with many other services), the <u>Resources for Basic Needs page</u> has a wide range of support for De Anza students and family members.

Academic Advising

For more general advice on setting up a study schedule, choosing a major/classes, and navigating other logistics of your degree, you can visit the <u>General Counseling Division</u>. There are also several other resources related to academics and other resources for De Anza students.

Schedule* of topics

Week	Notes	Reading	Important Dates			
Week 1	Day 1: Course Overview and Introduction to astronomy	Syllabus				
	Day 2: Community agreements; Practice with Units & the Night Sky	**OS Ch 1 (selected sections) & Sec 2.1				
Week 2	Day 1: Cultural and historical astronomy	OS 2.2-2.4				
	Day 2: Observing Skills	OS 7.1, 7.2, Canvas Reading				
Week 3	Day 1: No class, Martin Luther King Jr. Holiday					
	Day 2: Planetary Motion, Law of Gravity	OS 3.1-3.5	Week 1-2 Wrap up Quiz			
Week 4	Day 1: Seasons and Calendars	OS 4.1-4.4				
	Day 2: Lunar Phases and Eclipses	OS 4.5-4.7, Canvas Reading				
TAZoolo =	Day 1: Intro to light as a wave	OS 5.1-5.3	Weeks 3-4 Wrap-up Quiz			
Week 5	Day 2: Spectra	OS 5.4-5.6	Project Idea due Friday			
	Day 1: Telescopes	OS Ch. 6				
Week 6	Day 2: Science ethics	7.3, 7.4, Canvas Reading				
	Day 1: No Class, President's Day Holiday					
Week 7	Day 2: Earth as a Planet	OS 8.1, 8.2, 8.3, Canvas Reading	Weeks 5-6 Wrap-up Quiz Project Draft due Friday			
	Day 1: Lunar Surface and Features	OS 9.1-9.3				
Week 8	Day 2: Lunar Features Cont'd, Mercury	OS 9.4, 9.5, Canvas Reading				
Week 9	Day 1: Venus and Mars Geology	OS Ch. 10.1, 10.2, 10.4	Weeks 7-8 Wrap-up Quiz, Project Presentations Day 1/3			
	Day 2: Venus and Mars Atmospheres and Life on Mars	10.3, 10.5, Canvas Reading				
Week 10	Day 1: Giant Planets	OS Ch. 11	Project Presentations 2/3			
	Day 2: Giant Planets Cont'd	Canvas Reading				
Week 11	Day 1: Exoplanets	OS Ch. 11	Weeks 9-10 Wrap-up Quiz Project Presentations Day 3/3			
	Day 2: Finding ET; Final Exam prep	OS Ch. 14				
Finals Week	Final Exam in ADM 119 Tuesday 3/26, 1:45-3:45pm					

Student Learning Outcome(s):

- Appraise the benefits to society of planetary research and exploration.
- Compare and contrast the development of planetary systems and of the major panet types, including those factors that have led to Earth's unique characteristics.
- Evaluate astronomical news items or theories concerning solar system astronomy based upon the scientific method.
